

## Week 02 Quiz

### Problem 1

Which of the following is NOT a measure of central tendency?

- A) Mean
- B) Median
- C) Mode
- D) Standard Deviation

**Answer:** D) Standard Deviation

### Problem 2.

What is the mean of the numbers 5, 7, 9, 11, and 13?

- A) 7
- B) 9
- C) 10
- D) 11

**Answer:** B) 9 \* $(\text{Mean} = (5+7+9+11+13)/5 = 45/5 = 9)$ \*

### Problem 3

What is the median of the dataset: 3, 5, 7, 9, 11?

- A) 5
- B) 7
- C) 9
- D) 6

**Answer:** B) 7 *(Middle value in an ordered odd-sized dataset)*

#### Problem 4

If a dataset has a mean > median > mode, it is likely:

- A) Symmetric
- B) Negatively skewed
- C) Positively skewed
- D) Normally distributed

**Answer: C) Positively skewed (Right-skewed distribution)**

#### Problem 5

The following are the sorted scores (out of 100) of 15 students in an exam:

45, 52, 58, 62, 65, 70, 72, 75, 78, 80, 85, 88, 90, 92, 95

What is the 40th percentile of the exam scores? [Hint: if your answer is not listed, choose the one that is closest to your answer ]

- A) 65
- B) 69
- C) 71
- D) 75

**Answer: C) 71**

**Explanation:** Position =  $0.40 \times 15 = 6$ . The 40th percentile is  $(x_6 + x_7)/2 = (70+72)/2 = 71$ .

#### Problem 6

The ages (in years) of 10 employees in a company are:

**22, 25, 26, 28, 30, 32, 35, 40, 45, 50**

What is the 90th percentile of the employees' ages? [Hint: if your answer is not listed, choose the one that is closest to your answer ]

- A) 45
- B) 47.5
- C) 50
- D) 48.5

**Answer: B) 47.5**

**Explanation:** Position =  $0.90 \times 10 = 9$ . Since it's an integer, average the 9th and 10th values:  $(45+50)/2 = 47.5$ .

### Problem 7

The weights (in grams) of 9 apples are:

**100, 105, 110, 115, 120, 125, 130, 135, 140**

What is the 60th percentile of apple weights? [Hint: if your answer is not listed, choose the one that is closest to your answer ]

- A) 125
- B) 127.5
- C) 130
- D) 132.5

**Answer: A) 125**

*Explanation: Position =  $0.60 \times 9 = 5.4$ . Since it's not an integer, 6th value, which is 125.)*

### Problem 8

The five-number summary for monthly rainfall (in cm) in a city is:

**Minimum = 1.2, Q1 = 3.5, Median = 5.0, Q3 = 7.8, Maximum = 12.4**

What is the interquartile range (IQR)?

- A) 4.3 cm
- B) 5.6 cm
- C) 7.8 cm
- D) 11.2 cm

**Answer: A) 4.3 cm \*(IQR =  $Q3 - Q1 = 7.8 - 3.5 = 4.3$  cm.)\***

### Problem 9

Given the following dataset (sorted for convenience):

**12, 15, 18, 20, 22, 25, 28, 30, 32, 35, 38, 40, 42, 45, 48, 50, 52, 55, 58, 60, 62, 65, 68, 70, 72, 75, 78, 80, 82, 85**

What is the correct five-number summary? [Hint: if your answer is not listed, choose the one that is closest to your answer ]

- A) Min=12, Q1=30, Median=49, Q3=68, Max=85
- B) Min=12, Q1=28, Median=50, Q3=70, Max=85
- C) Min=12, Q1=30, Median=50, Q3=70, Max=85
- D) Min=12, Q1=25, Median=48, Q3=72, Max=85

**Answer: A)** Min=12,  
                   Q1=30,  
                   Median=50,  
                   Q3=70,  
                   Max=85

\*(Median:  $L = 0.5 \times 20 = 15$ , the average of 15th & 16th values  $(48+50)/2 = 49$ ;  
 Q1:  $L = 0.25 \times 30 = 7.5 \rightarrow L = 8$ , Q1 = 8<sup>th</sup> data value = 30;  
 Q3:  $L = 0.75 \times 30 = 22.5 \rightarrow 23$ , Q3 = 23<sup>rd</sup> data value = 68.)\*

### Problem 10

A dataset has 30 values:

10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, 52, 54, 56, 58, 60, 62, 64, 66, 68

What is the median (Q2)? [*Hint: if your answer is not listed, choose the one that is closest to your answer* ]

- A) 38
- B) 39
- C) 40
- D) 42

**Answer: B) 39**

\*(Median = average of 15th (38) and 16th (40) values =  $(38+40)/2 = 39$ .)\*

### Problem 11

A dataset of 30 values has a minimum of 10 and a maximum of 100, but one extreme outlier (1000) is introduced. How does this affect the five-number summary?

- A) Only the maximum changes
- B) Q1, Q3, and median change
- C) Only the minimum and maximum change
- D) The entire five-number summary changes

**Answer:** A) Only the maximum changes

*(Outliers affect only the min/max, not quartiles or median, unless they shift the data distribution drastically.)*

### Problem 12

According to the following box-and-whisker plot, what was the lower quartile weight of Frank's classmates?

(a) 65

(b) 95

(c) 75

(d) 125

**Answer c**

### Problem 13

According to the box-and-whisker plot, what was the median weight of a pumpkin at the annual pumpkin festival?

- A) 30
- B) 52.5
- C) 37.5
- D) 60

**Answer A**

#### **Problem 13**

What best describes a z-score:

- A). It is the average of all raw scores in a normal distribution
- B). It is the measure of dispersion in a distribution of scores
- C). It is the position of a score relative to the mean
- D). It is the frequency of a score in standardized units

**Answer C**

#### **Problem 14**

For a population with  $\mu = 80$  and  $\sigma = 12$ , what is the z-score corresponding to  $X = 71$ ?

- A). -0.50
- B). -0.75
- C). -1.00
- D). -1.5

**Answer B**

#### **Problem 15**

For a population with  $\sigma = 10$ , a score of  $X = 60$  corresponds  $z = -1.5$ . What is the population mean?

- A). 30
- B). 45
- C). 75
- D). 90

**Answer C**

$$(60 - \mu)/10 = -1.5 \rightarrow 60 - \mu = -1.5 \cdot 10 = -15 \rightarrow \mu = 60 + 1.5 \cdot 10 = 75$$

## Summary of Week #2 Assignment

The class boundary is: 70,80,90,100

cut.data.freq	Freq	midpts	rel.freq	cum.freq	rel.cum.freq
[7e+01,8e+01]	10	75.00	0.23	10	0.23
(8e+01,9e+01]	23	85.00	0.52	33	0.75
(9e+01,1e+02]	11	95.00	0.25	44	1.00

## 1. Five Number Summary :

The five-number summary is used to describe the shape of the distribution of a given numerical data. It consists of five numbers: minimum data value, first quartile, median, the third quartile, and the maximum data value.

The five-number summary of this given data set is:

stats	value
Min.	70.00
1st Qu.	85.00
Median	90.00
3rd Qu.	91.25
Max.	100.00

## 2. Boxplot :

The boxplot is a geometric representation of the five-number summary. The boxplot of the given data set is given below.
