

## Description of Amazon Review Classification

This dataset was created from the scraped reviews from products on Amazon for **text classification**. The classes are three in number namely;

- Negative Reviews
- Neutral Reviews
- Positive Reviews

Data columns include;

- Sentiments
- Cleaned Review
- Cleaned Review Length
- Review Score

This dataset presents the problem of multiclass classification with the use of **ML algorithms and also deep learning algorithms**. Moreover, there is a class imbalance; negative reviews have the lowest number of reviews compared to positive and neutral reviews.
