

## About this file

The California housing dataset contains information on various socio-economic features of block groups in California. Each row in the dataset represents a single block group, and there are 20,640 observations, each with 10 attributes. The Features are as follows:

- 1.Longitude: The longitude of the center of each block group in California.
- 2.Latitude: The latitude of the center of each block group in California.
- 3.Housing Median Age: The median age of the housing units in each block group.
- 4.Total Rooms: The total number of rooms in the housing units in each block group.
- 5.Total Bedrooms: The total number of bedrooms in the housing units in each block group.
- 6.Population: The total population of the block group.
- 7.Households: The total number of households in the block group.
- 8.Median Income: The median income of the block group.
- 9.Median House Value: The median value of the housing units in the block group.
- 10.Ocean Proximity: The proximity of the block group to the ocean or other bodies of water.
